endosurgery

Apollo Care enables clinics to engage patients in or out of the office 24/7 with up to the minute pertinent biometric data gathered from a bioimpedance scale, wristband/tracker and mobile app then displayed on a dashboard.

Alerts provide actionable insight for patients out of compliance, slipping or achieving goals.

HIPAA and GDPR compliant **messaging**, automated **scheduling** and reporting significantly reduce time spent on administrative tasks.

Apollo Care helps clinics improve patient outcomes, retention, referrals and reactivations.

Retention

Outcomes have improved, patients stay on their programs longer.

Referrals

90% of patients surveyed recommend the mobile app to other patients.

Reactivation

66% are still using the devices and mobile app a year after finishing their program. Data continues to be uploaded to the clinics in real time. This data is used to reactivate patients that are slipping before they buy something from a TV ad.
